### **Descriptions :**

- The Chip-LED Taping is much smaller than lead frame type components, thus enable smaller board size, higher packing density, reduced storage space and finally smaller equipment to be obtained.
- Besides, lightweight makes them ideal for miniature application, etc.

### Soldering heat reliability ( DIP ):

Please refer to the following figure :

### **Precautions For Use :**

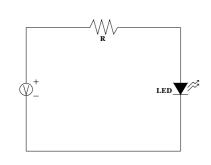

• Over – current – proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen)

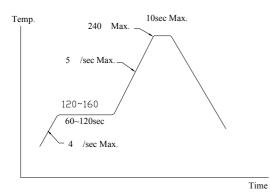

- Storage
- 1. The operation of temperature and R.H. are : 5 30 , 60% R.H. Max..
- 2. Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a dampproof box with desiccating regent. Considering the tape life, we suggest our customers to use our products within 1.5 year ( from production date ) .
- It's recommended to bake before soldering when the package is unsealed after 72 hrs. The condition is : 60 ±5 for 15 hrs.
